Re: Data Engineer

Dear Lumen Labs Team,

Building smarter tools for music discovery is exactly the kind of mission that excites me, and I believe my background in data engineering makes me a strong fit for your team.

At Harbour Foods I build the Python and SQL pipelines behind our daily dashboards, and I moved our weekly reports to automated jobs that save the team hours every week.

I would love to help Lumen Labs turn listening data into features people enjoy, and I am available for a conversation at your convenience.

Kind regards,

Alex Example
